

REGUMIX

A REGULATED RELEASE FEED

An 18% as supplement fed high energy for mixed forage diets.

Key benefits

- Excellent source of Effective Ruminant Degradable Protein (ERDP) and Fermentable Energy (FME)
- Higher dry matter intakes and increased forage utilisation
- Cost effective alternative to a dry blend
- Better dietary protein balance
- A cost-effective supplement to optimise use of bulk feeds
- Improved animal performance and health
- Ideal combination of natural and regulated release protein

Regumix is a highly palatable, molasses based feed, rich in protein and energy and designed to get the most from forages.

At 27% crude protein and 13.1ME, it is designed to complement grass, whole crop, maize silage and straw-based rations, correcting both energy and degradable protein imbalances.

TYPICAL DRY MATTER ANALYSIS

Dry matter (%)	67
ME (MJ/kg DM)	13.1
Crude protein (%)	27
Total sugars (%)	53

Original and best - a proven regulated release feed

What it can do for you

- Improve the performance of mixed forage diets
- Increase energy intake
- Enhance overall diet palatability and intakes
- Provide highly effective protein and energy supplementation at sensible cost
- Simplify feeding and save you time
- Correct ERDP deficiencies in diets

Regumix is particularly suited to total mixed rations (TMR's) where lower protein ingredients are being fed alongside grass silage. In this role, it boosts overall palatability and supplements protein and energy levels. Regumix can be used to replace a proportion of dry blend to improve performance and reduce cost.

As a forage supplement it is valuable in dairy, rearing heifer, beef and sheep rations and it is especially useful where straw is fed. The feed also contains supplementary levels of sulphur and it is known that this aids the digestion of more fibrous materials.

Its excellent palatability, combined with good levels of protein and energy also make Regumix ideal to balance buffer feeds for grazing animals.

Where maize or whole crop cereal silage are being fed at over 50% of the total forage ration, even higher levels of protein are required and another Regulated Release feed, for example, Regumaize is recommended.

About Regulated Release

This unique, patented process, developed by ED&F Man Liquid Products is designed to give rumen bacteria exactly what they need to thrive - a balanced and synchronised supply of energy and protein - leading to increased microbial protein production and better animal performance.

How to use Regumix

Regumix can be stored and handled as easily as conventional molasses blends - and provides similar benefits in terms of feed texture and palatability. It is easy to use in a range of feeding systems - from TMR wagons to simply layering onto forages along feed passages or in troughs.

Typical feeding rate for cows is 2kg/head/day, so a 10 tonne delivery, stored conveniently in a bulk tank, will support 100 cows for 50 days. Typical feeding rate for sheep is 0.25kg/head/day.

Fresh-Guard

Regumix is available with a Freshguard option.
