

Coating products have grown in popularity. They are used for a range of reasons including cost savings compared to conventional fat coating, more effective dust control, and improving the appearance on premium products. Whether you're making coarse mixes, blends or compounds, it is essential that you achieve the desired finish on the feed to satisfy the customer.

Conventional coating products can be difficult to handle and require specialist heating systems, whilst basic molasses products do not provide a long lasting finish and can be difficult to handle. ED&F Man has developed a range of specialist liquid coating products, designed to be used in a wide range of feed production systems. ED&F Man now offer a range of coating products; each tailored to precise market requirement and individual customer needs. We also have the flexibility to offer bespoke products to suit specific feed production needs.

Key Benefits

- Reduced Dust
- Easier Handling
- Cleaner machinery
- Improved appearance
- Better keeping quality
- Cost savings

Product Range

Molglo: The first high performance coating product into the UK market, and remains the market leader for quality coarse mixes. Used extensively by the UK's premier horse feed manufacturers. Incorporating Soya bean oil and multi-sugar liquid co-products, combined with emulsifiers and surfactants, to produce a liquid that is free flowing and highly penetrating. Included at up to 10% Molglo provides a long lasting glaze ideal for bagged products.

BlendFlo Extra: Ideal for high value bulk blends and coarse mixes. Produces a finished product.

BlendFlo Standard: Ideal general purpose coating liquid, suitable for all types of blends and coarse mixes.

BlendFlo Easy: Ideal for lower value bulk blends where de dusting and good handling are key driver.

BlendFlo Mix-a-Coat: Cost effective dust suppression, ideal for mobile mill and mix operations.

SCOPE: Using sugar coating technology as a viable alternative to liquid fat, SCOPE offers a range of products to suit the value and physical properties of the finished feed and application system. Options available for high volume economy compounds through to specialist bagged feeds and pet foods.

Bespoke Products

With the wide range of feeds being manufactured, sometimes there may not be an existing product exactly suitable. In this situation, ED&F Man can use its expertise in liquid blending to produce a liquid tailored to the individual requirements. We can also advise on liquid application systems to ensure the desired results are obtained in a cost effective package. Whatever the production system, either static or mobile, ED&F Man can produce a coating product that works for you.
